- Context API
- Formik & Yup
- Styled Components
- Jest & React Testing Library

Interests

PC Building
Rock Climbing
Sustainability

Full clean UK Driving License held for 4 years

Jules Woodwark
Front-End Developer

Enthusiastic self-taught front-end developer with previous commercial experience in the eCommerce sector. A proven track record of adaptability to new technologies and tools, with an aptitude for problem solving. I take pride in my ability to produce lean, stable, tested and maintainable code. I relish team work and have a good understanding of Agile methodologies and the importance of achieving deadlines.

Experience

Personal Development
01/2019 – Present

Since my previous related position, I had a brief stint in the environmental sector, before I decided to return to web development. Since then, I have been studying, completing several online courses & bootcamps, creating countless mini applications. I have mostly focused on JavaScript and React, and I now feel ready to become a real asset as a junior front-end developer.

Website Manager & Front-End Developer
Ridgeway Leather
01/2016 – 02/2018

- PHP • MySQL • jQuery • HTML • CSS

I oversaw the transition of the company's website from CS-Cart to Magento. This involved:

- Managing a small internal team and coordinating work with several external developers using Asana.

- Creating CSV templates for product data for over 12,000 products.

- Installing, configuring and customizing Magento plugins.

- Creating and refining a Google Marketing campaign which increased the company's website revenue by 2,400% and its traffic by up to 2,900% during the festive period.

- Optimizing the website for both SEO & performance, achieving high scores in Google PageSpeed Insights.

- Refactoring a base theme to be mobile first and responsive, using modern CSS and best practices.

- Creating SEO rich and customer engaging landing pages.

- Creating custom HTML email templates for both marketing and the payment confirmation system.
